🛡️ CyberSafe World

A browser-based 3D educational RPG that teaches cybersecurity concepts to different audiences through exploration, puzzles, and dialogue. Built with Three.js — no installation required.

🎮 About the Game

CyberSafe World is set in a colourful modern town called **Netville**. Players explore the world and encounter the **PHISH Gang** — a group of villains each specialising in a different type of cyber threat. Players defeat them not with weapons, but with **knowledge**.

The game is designed to be fun-first and educational second — real cybersecurity concepts are embedded naturally into gameplay.

👥 Audience Modes

When you open the game, you choose one of three modes:

Mode	Audience	Description
👧 **For Kids / Bērniem**	Ages 8–12	Fast-paced, playful, adventurous
👴 **For Elderly / Senioriem**	Older adults	Larger text, slower pace, familiar examples
🖥️ **For Beginners / Iesācējiem**	No computer experience	Step-by-step, extra guidance

---

🌐 Languages

The game is fully bilingual:

- GB **English**
- LV **Latvian (Latviski)**

Switch language at any time from the start screen or in-game HUD.

🦹 Villains — The PHISH Gang

English Name	Latvian Name	Threat
🎣 Phishy Phil	Makšķeris Māris	Phishing emails & fake links
🔓 Passman	Paroles Pēteris	Weak passwords & brute force
🕵️ Soci-Al	Viltus Valdis	Social engineering
💻 Mal-Ware	Vīruss Visvaldis	Malicious downloads & viruses
👑 The Broker	Datu Dāvis	Data theft & identity fraud

🕹️ Controls

Action	Control
Move	WASD or Arrow Keys
Rotate camera	Click and drag
Zoom in/out	Scroll wheel
Back to menu	🚪 Menu button

🚀 How to Run

Option 1 — Open locally

1. Download `index.html`
2. Open it in any modern browser (Chrome, Firefox, Edge)
3. No server or installation needed!

Option 2 — Host on GitHub Pages

1. Upload `index.html` to a GitHub repository
2. Go to **Settings → Pages**

3. Set source to **main branch**
4. Your game will be live at `https://yourusername.github.io/your-repo-name`

🛠️ Built With

- Three.js r128 — 3D rendering
- HTML5 Canvas — road & ground textures
- Vanilla JavaScript — game logic
- No frameworks, no build tools, no dependencies to install

📁 File Structure

```
cybersafe-world/

├── index.html      ← The entire game (single file)
└── README.md       ← This file
```

🗺️ Development Roadmap

- [x] 3D open world town
- [x] Third-person camera (rotate, zoom)
- [x] Player character with walking animation
- [x] Bilingual support (EN / LV)
- [x] Three audience modes
- [x] Player name personalisation
- [x] Menu / mode switching
- [ ] First villain encounter (Phishy Phil)
- [ ] Puzzle mini-game system
- [ ] NPC dialogue system
- [ ] Background music & sound effects
- [ ] CyberPad UI — inventory & skills
